The Gerlach,

STRICTLY FIRE PROOF
FAMILY HOTEL.

27TH ST. BETWEEN BROADWAY & 6TH AVE.

New York, Jan. 16 1894

Dear Miss Clews,

I have not forgotten our pleasant excursion with the Corbins two years ago and the interest you manifested in some of my ideas. Here I am better able to illustrate by demonstrations in my laboratory than to express in words, and hoping that your interest has not died out I venture to extend to you this cordial invitation to witness some of my experiments in my laboratory this evening.

I have a party of mutual

friends (Mrs. and Mr. Jno Vickers, Mr Theines
V. Fair and K. Duer and Messrs. C. Mackay
and R. Ronalds) to dine with me
at the Waldorf at eight o clock
and to visit my laboratory
afterwards.

Your presence would greatly
add to the pleasures of the
evening and knowing from our
conversation the interest you have
in scientific subjects I believe
that you will eventually consider
the evening well spent.

Kindly oblige by answering
either by telephone 299 Spring
or by note to 46 East Houston St.

I remain yours sincerely

N. Tesla.

My dear Johnson,

Nikola Tesla

very pressing work and also inability to make up my mind as to what would be best to do are two among many other reasons why I did not write yesterday upon receipt of the Century's dispatch.

I am so much absorbed now in the work I am doing that I can not make a distinction between the pleasant and disagreeable and I can not tell just how I feel about the matter, but as nearly as I can make out I experience now a regret for having communicated with you at all. My excuse may be the motive and I acted under the influence of a momentary thought that I might be, in an infinitely small measure,

DSI

useful to my friends for the Century.
I have been for the past few years besieged
on rather pestered with all sorts of proposals
from publishing establishments to say something
about the work in which I have been during
this time engaged, but I have invariably refused.
I have never forgotten the kind [illegible] expressed
to me often and thought that if I should
have any time to spare I would devote it to you.
Now we are coming down to a transmission
of power without wires a problem on which
I am at work since eight years. But though,
in my opinion, the realization is not far away it
is of course a subject still further from the
mind of the average reader than wireless telegraphy
was in 1890 when I published my system, or the
art of telegraphics — which is to some universal
peace, is now — but U.S., many readers would
be interested, as already technical circles are
beginning to pay serious attention to my efforts in
this direction, as I note from scientific periodicals.
Unless to tell you that I have no time to write
much of an article, but I could furnish [illegible]
interesting photographs and they would make
[illegible] for
poor less it all probably palatable. Especially if
[illegible] only
It is now for you to say whether a [illegible] article
on this subject would be work anything it would for you; if
so I shall furnish it with pleasure, but I must
turn you in advance to expect very little.
About the photographer I have come to the conclusion that it
would be best to have Mr. Alley come here. The shipping of
many plates, the delay, poorer work e.t.c. all disadvantages with an
inexperienced man, however good he may be, - and the outrageous charges will more
than pay Mr. Alleys expenses. Let me know by wire your future success
N Tesla

FROM

NIKOLA TESLA,

35 South Fifth Avenue.

New York, Jan. 22nd, 1895.

Ans. Jan. 23/95.

Mr. L. J. B. Lincoln,

New York City.

Dear Mr. Lincoln:-

I have to thank you for your kindness in forwarding me the tickets for the entertainment Saturday evening.

I was there, and endeavored to meet you, but I was not fortunate.

I have much regretted my inability of availing myself of the opportunity you kindly offered me to meet Mr. Parker, and I can only hope that I shall have this pleasure some other time.

In my desire to reciprocate I venture to invite you to my laboratory to-morrow, Wednesday, at 3 P.M. if you wish to witness a few electrical experiments, and if you are not otherwise engaged.

Any of your friends will be, of course, welcome.

Very truly yours,

N. Tesla

Dear Sir:

The ice machine referred to in the article is of my own invention but I have purposely avoided to convey this knowledge as such a statement might have been misconstrued.

The device is not yet ready for the market and I cannot entertain any proposal for the time being but expect to be in a different position in the near future.

Yours very truly,

N. Tesla

Dear Prof. Carhart:-

Your letter of April 7th together with the cell and statement regarding the same have been duly received. Kindly excuse this delay in acknowledging the receipt and believe me that I am very much obliged for your kindness which I hope to reciprocate.

I inclose a check for $15 for the cell as agreed.

Yours very truly,

N. Tesla

Ann Arbor, Mich.

Dear Prof. Carhart:-

I was very sorry that, when you called the other day, I had to go away so soon. I hope that on your next visit to this City you will inform me of your coming.

I shall be very much obliged if you will mind the little matter you promised, but, of course, as I have told you, I could not accept the cells unless I am permitted to pay for them as any other customer.

Believe me to be,

Yours very truly,

N. Tesla
